

Daniel Lightowler

2013 - 2020

I studied at TGAW for all of my secondary school and also Sixth Form. I studied maths, physics and music. I loved all three. Maths and physics pushed my problem solving skills and widened my scope of thinking, preparing me for university. I especially loved music for how fun the teachers made the subject and the extra-curricular activities.

I went to Exeter University to do Mechanical Engineering. My time at university has been great. I have done lots of engineering, learnt lots about life, and played lots of music. I joined a society rugby club, Exeter Engineers, and the Exeter University Open Water Swimming Society that led swims at local beaches and lakes.

My plans for the future are not set in stone, I have multiple options. I initially plan on finding a job in engineering and then make my way from there, hoping to learn more about what I can do and what I would like to do.
